The invention relates to a method of inducing, in a susceptible host, the production of antibodies against a CS6 protein, comprising administering a composition of matter comprising bacteria transformed with a plasmid containing genes cssA, cssB, cssC and cssB, an origin of replication, a Lac promoter and a kanamycin resistance gene, where the bacteria expresses both CS6A and CS6B proteins. The invention also relates to a composition of matter comprising a protein in a pharmaceutical carrier. The pharmaceutical carrier is a carbonated liquid. The method is useful for inducing the production of antibodies against the CS6 protein. The

                     The invention relates to a method of inducing in a susceptible host, the production of antibodies against CS6 protein comprising giving a composition of matter made of bacteria transformed with a plasmid, which contain genes cssA and cssB, all of cssC and DNA sequence cssD that encodes at least 802 amino acids (at least 2406 base pairs), an origin of replication, a Lac promoter, and a kanamycin resistance gene, where the bacteria overexpress both CS6A and CS6B proteins. The method and proteins are useful for stimulating protective antibodies against enterotoxigenic Escherichia coli. This sequence corresponds to the E. coli CS6 ccsA
                                                                                                                                                                                                   Inducing in a susceptible host, the production of antibodies against CS6 protein, useful for stimulating protective antibodies against Escherichia coll by administering a composition comprising bacteria transformed with

                    The invention relates to a method of inducing, in a susceptible host, the production of antibodies against a CS6 protein, comprising administering a composition of matter comprising bacteria transformed with a plasmid containing genes cssA, cssB, cssC and cssB, an origin of replication, a Lac promoter and a kanamycin resistance gene, where the bacteria expresses both CS6A and CS6B proteins. The invention also relates to a composition of matter comprising a protein in a pharmaceutical carrier. The pharmaceutical carrier is a carbonated liquid. The method is useful for inducing the production of antibodies against the CS6 protein. The protein and composition are used as vaccines for preventing pathological effects of enterotoxigenic E. coli. This sequence represents the Escherichia coli E8775 antigen cssA of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CS6; cssA; cssB; cssC; cssD; origin of replication; Lac kanamycin resistance gene; CS6A; CS6B; enterotoxigenic Escherichia coli E8775.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    용
The invention relates to a method of inducing in a susceptible host, the production of antibodies against CS6 protein comprising giving a composition of matter made of bacteria transformed with a plasmid, which contain gennes cssA and cssB, all of cssC and DNA sequence cssD that encodes at least 802 amino acids (at least 2406 base pairs), an origin of replication, a Lac promoter, and a kanamycin resistance gene, where the bacteria overexpress both CS6A and CS6B proteins. The method and proteins are useful for stimulating protective antibodies against enterocoxigenic Escherichia coli. This sequence corresponds to the E. coli CS6 ccsA
                                                                                                                                                                                                                      WPI; 2005-131784/14.

Inducing the production of antibodies against CS6 protein, useful for preventing pathological effects of enterotoxigenic E. coli, by administering a composition comprising transformed bacteria producing CS6

Claim 6 SEQ ID NO 10; 22pp; English

The invention relates to a method of inducing, in a susceptible host, the production of antibodies against a CS6 protein, comprising administering a composition of matter comprising bacteria transformed with a plasmid containing genes cssA, cssB, cssC and cssD, an origin of replication, a Lac promoter and a kanamycin resistance gene, where the bacteria expresses both CS6A and CS6B proteins. The invention also relates to a composition of matter comprising a protein in a pharmaceutical carrier. The pharmaceutical carrier is a carbonated liquid. The method is useful for inducing the production of antibodies against the CS6 protein. The protein and composition are used as vaccines for preventing pathological effects of enterotoxigenic E. coli. This sequence represents a CS6 protein of

                         production of antibodies against a CS6 protein, comprising administering a composition of matter comprising bacteria transformed with a plasmid containing genes casa, casa, casa and casa, an origin of replication, a Lac promoter and a kanamycin resistance gene, where the bacteria expresses both CS6A and CS6B proteins. The invention also relates to a composition of matter comprising a protein in a pharmaceutical carrier. The pharmaceutical carrier is a carbonated liquid. The method is useful for inducing the production of antibodies against the CS6 protein. The protein and composition are used as vaccines for preventing pathological effects of enterotoxigenic E. coli. This sequence represents the Escherichia coli E8775 antigen cssB of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ramamycin resistance gene; Escherichia coli E8775.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Escherichia coli

                                 The invention relates to a method of inducing in a susceptible host, the production of antibodies against CS6 protein comprising giving a composition of matter made of bacteria transformed with a plasmid, which contain genes cssA and cssB, all of cssC and DNA sequence cssD that encodes at least 802 amino acids (at least 2406 base pairs), an origin of replication, a Lac promoter, and a Kanamycin resistance gene, where the bacteria overexpress both CSGA and CSGB proteins. The method and proteins are useful for stimulating protective antibodies against enterotoxigenic Escherichia coli. This sequence corresponds to the E. coli CSG ccsB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ADW47734
                                                                                                                                                                                                             Inducing in a susceptible host, the production of antibodies against CS6 protein, useful for stimulating protective antibodies against Escherichia coli by administering a composition comprising bacteria transformed with

                                                                                                                                                The present invention relates to Aspergillus fumigatus genes that are essential and are potential targets for drug screening. The methods and compositions of the present invention are useful for diagnosing and/or treating invasive Aspergillus fumigatus infection, including the allergic forms of the disease, such as Farmer's lung disease. They can also be used in various drug discovery purposes, such as expression of the recombinant protein, hybridization assay and construction of nucleic acid arrays. The present sequence represents an Aspergillus fumigatus essential gene protein sequence, used during diagnosis and drug development in the invention. These genes share a high degree of sequence conservation with known essential genes of candida albicans. The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format from WIPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     drug
                                                                                                                                                                                                                                                                                                                                                                                                      New purified or isolated Aspergillus fumigatus nucleic acid molecule encoding a gene product, useful for diagnosing and/or treating invastungal infections, such as Farmer's lung disease.

                                                                                                                                   The invention relates to an isolated or purified nucleotide sequences (I) from Legionella pneumophila Paris strain. (I), and their related sequences or fragments, are useful as primers and probes for detection and amplification, including differentiation between the Paris and Philadelphia strains of Legionella pneumophila and to prepare recombinant (hybrid) polypeptides (II). (II) are also useful for preparation of specific antibodies (Ab), also used for detection/identification of Legionella, and some (I), specifically those involved in synthesis of surface proteins, are targets for identification of inhibitors. (II), or vectors that contain (I), are useful as vaccines and immunogenic compositions, for treatment and prevention of infections by L. pneumophila. The present squence represents the amino acid sequence of a
                                                                                                                                                                                                                                                                                                                                                              New genome of Legionella pneumophila Paris strain and derived polypeptides, useful for detection or identification of the s for treatment and prevention of infections.

The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN6044-ABN71256 and antibodies that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by.

Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.

Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to determine whether a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningits. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New Streptococcus protein for the treatment or prevention of infection disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 2002-352536/38.

RESULT 14
AEA36463
CC threonine aldolase, a mitochondrial targeting sequence, a 5 DNA promoter controlled and 3' terminator sequence, where the nucleic acid molecule, the mitochondrial targeting sequence, the promoter, and the terminator cc are operatively coupled to permit transcription of the nucleic acid molecule. This nucleic acid construct may be used in the generation of conscious and the terminator cc molecule. This nucleic acid construct may be used in the generation of conscious and the mitochondrial targeting sequence comprises a mitochondrial targeting sequence comprises a constituction and transcription of cold molecule may comprise a dominant negative mutation and encode a constructional threonine aldolase, resulting in suppression or interference of endogenous mRNA encoding threonine aldolase. The nucleic acid molecule is positioned in the nucleic acid construct to result in compression or interference of endogenous mRNA encoding threonine aldolase and be in the sense orientation, or the nucleic acid molecule is an antisense cform or a threonine aldolase conditions to a threonine aldolase and incording threonine aldolase and be caused by a chemical mutagenizing agent, e.g. or ethylmethanseulfonate, radiation, e.g. ultraviolet rays, gamma rays, or conditions to inactivate the gene, where the deactivating nucleic acid molecule into conditions to inactivate the gene, where the deactivating nucleic acid conditions acid molecule acid molecule acid molecule is a transposon, a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid construct comprising a nucleic acid molecule, mitochondrial targeting, promoter, and terminator sequences, useful increasing threonine content in plant seeds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               threonine aldolase; silencing; mitochondrial targeting sequence; transgenic; soybean; alternative oxidase; potato; formate dehydrogenase; Nicotiana plubaginifolia; mitochondrial ATP synthase beta-subunit;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    configured to silence threonine aldolase expression or encodes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           an example of a threonine aldolase which may be silenced by the nucleic acid molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  isoleucine content in a plant comprises providing a non-wild-type plant having increased threonine content compared to a corresponding wild-type plant, transforming the non-wild-type plant with a nucleic acid construct described above under conditions to yield a transgenic plant that over expresses an enzyme that functions to catalyze biosynthesis of isoleucine from threonine, and growing the transgenic plant under conditions to increase the isoleucine content of the transgenic plant. The nucleic acid construct and methods are useful for increasing threonine content in plants, particularly in plant seeds, which are then used in producing animal feed and foodstuff.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Scoring table:
Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                    74
